Flagship asset 100%-Owned

- La Joya Silver (Cu-Au) Project in the Mexican Silver Belt

Latest Milestones

- Fully funded 3,500 m diamond drilling program in progress at La Joya
- Sold Ranger-Page Project to Bunker Hill Mining in an all-stock transaction

INVESTOR PRESENTATION

September 2026

Caution Regarding Forward-looking Information

Certain of the statements made and information contained herein is “forward-looking information” within the meaning of the British Columbia Securities Act and Alberta Securities Act. This includes statements by the Company concerning exploration results, including deposit size, quantities, grades and contained metals, which are generally made on the basis of estimations and extrapolations from a limited number of drill holes and assays. These estimations and extrapolations are subject to uncertainties, which include but are not limited to uncertainty in connection with evaluating a deposit until the deposit has been extensively drilled on closely spaced centers. Should one or more of these underlying estimations or extrapolations prove incorrect, actual results may vary materially from those described in forward-looking statements.

Forward-looking statements contained herein also includes the Company’s plans at its mineral properties, which involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company, or industry results, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking information. Forward-looking information is subject to a variety of risks and uncertainties which could cause actual events or results to differ from those reflected in the forward-looking information, including, without limitation, the ability of the Company to continue to be able to access the capital markets for the funding necessary to acquire and maintain exploration properties and to carry out its desired exploration programs; difficulties in executing exploration programs on the Company’s proposed schedules and within its cost estimates, whether due to weather conditions in the areas where it operates, increasingly stringent environmental regulations and other permitting restrictions, or the availability of essential supplies and services; and factors beyond the capacity of the Company to anticipate and control, such as the marketability of minerals, government regulations relating to health, safety and the environment, and the scale and scope of royalties and taxes on production. Should one or more of these risks or uncertainties materialize, actual results may vary materially from those described in forward-looking statements.

Accordingly, readers are advised not to place undue reliance on forward-looking information. Except as required under applicable securities legislation, the Company undertakes no obligation to publicly update or revise forward-looking information, whether as a result of new information, future events or otherwise.

The securities of the Company have not and will not be registered under the U.S. Securities Act of 1933, as amended (“U.S. Securities Act”) or any state securities law and may not be offered or sold within the United States unless an exemption from the registration requirements of the U.S. Securities Act is available. Accordingly, any offer or sale of securities will only be offered or sold (i) within the United States pursuant to available exemptions from the registration requirements of the U.S. Securities Act in a private placement transaction not involving a public offering and (ii) outside the United States in offshore transactions in accordance with Regulations S of the U.S. Securities Act. Neither the U.S. Securities and Exchange Commission, nor any other U.S. authority, has approved this presentation. This presentation does not constitute an offer to sell, or the solicitation of an offer to buy, any securities in the United States.

	60		27,900	57.5	0.28	0.48	112.2	51,600	258.8	288,400

This historical mineral resource estimate (MRE) for the MMT and Santo Nino Deposits is based on work done or compiled by SilverCrest Mines, with an effective date of Dec.16, 2012.

Key assumptions, parameters, and methods used to prepare the historical mineral estimation:

1. Silver equivalency (AgEq) cut-off includes silver, gold and copper; and excludes lead, zinc, molybdenum and tungsten values.
2. Ag:Au is 50:1, Ag:Cu is 86:1, based on the then 5-year historic metal price trends of US\$24/oz silver, US\$1200/oz gold, US\$3/lb copper and 100% metallurgical recovery. All numbers are rounded.
3. Inferred Resources were estimated from geological evidence and limited sampling and must be treated with a lower level of confidence than Measured and Indicated Resources.
4. The mineral estimation was classified by EBA, a Tetra Tech Company, and was reported to conform to NI 43-101, 43-101CP, and CIM definitions for resources standards at that time.

Note: A qualified person of Silver Dollar has not done sufficient work to classify the historical resource, and the Company is not treating it as a current mineral resource.

Historical Drill Results

Historical resource model included a total of 56,849.33 metres of drilling over 173 drill holes

- Historic drilling consistently returned high-grade drill results with the highest assay grades reported in 2014 of **1,915 grams per tonne (g/t) Ag** over 0.45 metres (m) in hole LJ DD14-116, **20.4 % Cu** over 0.55 m in hole LJ DD14-116, and **33.5 g/t Au** over 1.0 m in hole LJ DD14-120. These results were not included in the historical resource estimation.
- Discrete high-grade stockwork and structurally controlled veining style mineralization such as in hole LJ DD14-116 that intercepted 2.0 m from 86 to 88 m grading **723.5 g/t Ag, 8.97 % Cu and 0.09 g/t Au**.
- Continuous broad intervals hosted in replacement manto style mineralization, such as in hole LJ DD14-114 that intercepted **66.4 m** (from 27.1 to 93.5 m) grading **43.5 g/t Ag, 0.27 % Cu and 0.38 g/t Au**.
- Outcropping and near-surface mineralization, such as in holes LJ DD14-109 that intercepted **21.92 m** (from 1.8 to 23.72 m) grading **31.5 g/t Ag, 0.36 % Cu and 0.95 g/t Au**.
- The Oct. 2013 Preliminary Economic Assessment (PEA) was based on a historical mineral resource estimate (effective date December 26, 2012) for the MMT and Santo Niño deposits, which considered only silver, gold, and copper values (see previous slide). However, Silver Dollar does not consider the historical PEA or the mineral resource estimate (MRE) as current or NI 43-101 compliant.

SILVER DOLLAR
RESOURCES

La Joya 2026 Exploration Plan

SILVER DOLLAR
RESOURCES

New Exploration Concept: underground, higher grade, smaller footprint, easier to permit

A desktop review of all historical data on the deposits and surrounding mineralized areas is underway to prioritize targets and generate a new 3D geological model. This will aid in the design of drill programs to upgrade confidence in, and continuity of, the known mineralized blocks and test the hypothesis that “San Martin Type” extensions exist at depth.

The goal is to improve targeting in support of an exploration and mining strategy shift from open pit to underground, consider hypothetical underground mining methods, and continue to identify and test high-priority exploration targets to add value to the Project.

New Exploration Concept

Underground approach: Silver Dollar's El Brazo discovery provides evidence of deeper mineralization

- The **discovery of San Martin-type mineralization at La Joya** (Coloradito Intrusive "El Brazo" 1 km west of the MMT) **provides evidence** supporting the concept of **deeper mineralization near La Joya's main intrusions**.
- Located ~25 km southeast of La Joya, San Martin contained **>300 Moz of silver** with ore located in carbonates just away from the intrusive contact and **mineralization extending to a depth of 1,250 m**
- San Martin and La Joya are in the **same formations, with intrusions of similar size, age and composition**.
- **Five new deep targets at La Joya** for San Martin-type mineralization are **below known mineralization** or **magnetic anomalies** just off the sides of the intrusives:
 - Central Dyke: **sample #161 3,823 g/t AgEq**
 - El Brazo: **535 g/t AgEq / 5m** in hole NOR-22-013
 - North Side: **696 g/t AgEq / 8.6m** in hole LB96-04
 - Road Zone: **58 g/t Ag, 29 g/t Au and 0.15% Cu / 1.01 m** in hole NOR-21-004
 - El Puerto Mag Anomaly: **a blind target** in the saddle between Coloradito and the MMT.

Note: In assays above, silver equivalent is calculated using the following metal prices in USD: Au \$1,750/oz, Ag \$22/oz, Pb \$1.25/lb, Zn \$1.50/lb, Cu \$4.30/lb. Recoveries of Au 66%, Ag 93%, Cu 70%, Pb 87%, Zn 84%, historically reported from Pan American Silver's La Colorada mine and Southern Silver's Cerro Minatas mine (Cu only), have been used in the AgEq calculation, and are assumed to be comparable to anticipated recoveries at La Joya. Reported assay results are factored according to historic recoveries reported above.

San Martin Comparison

Cross-Sections of El Brazo Discovery and San Martin Mine

In both cases, mineralization is focused down the contact near the outer limit of skarn alteration surrounding the intrusion

Note: in assays above, silver equivalent is calculated using the following metal prices in USD: Au \$1,750/oz, Ag \$22/oz, Pb \$1.25/lb, Zn \$1.50/lb, Cu \$4.30/lb. Recoveries of Au 66%, Ag 93%, Cu 70%, Pb 87%, Zn 84%, historically reported from Pan American Silver's La Colorada mine and Southern Silver's Cerro Minatas mine (Cu only), have been used in the AgEq calculation, and are assumed to be comparable to anticipated recoveries at La Joya.

La Joya - San Martin Comparison

Historically, San Martin is one Mexico's most economically significant and largest skarn deposits

- Spanish explorer Juan de Tolosa is credited with **discovering San Martin's rich silver veins in 1556.**
- Comparative maps **side by side in plan view and cross-section.**
- Prospective deep “San Martin” type exploration targets at La Joya could **be at depth** all around the intrusions.
- Five initial targets identified below known mineralization on the edge of the intrusions at **Central Dyke, El Brazo, North Side, Road Zone**, and along the projection of the **El Puerto** magnetic anomaly– a blind target coincident with a topographical low between Coloradito and the Main Mineralized Trend (MMT).

Source: González-Partida and Camprubí (2006), and modified from Rubin and Kyle (1988) and Starling et al. (1997)

Drilling in Progress at La Joya

SILVER DOLLAR
RESOURCES

Fully funded, 3,500-metre drilling program will test for deep San Martin-type mineralization

Silver Dollar's Phase III drilling is ongoing on several targets that have been developed outside the area of the historic resource to test for deep San Martin-type mineralization below known mineralization or magnetic anomalies near the margins of the intrusive bodies.

Drill targets include **Central Dyke, El Brazo, North Side, Road Zone, and El Puerto.**

The Company is fully funded and ready to expand the drill program as drill results are received and targets become more clearly defined.

Ranger-Page Silver (Zn-Pb) Project

SILVER DOLLAR
RESOURCES

Silver Dollar completed the sale of Ranger-Page to Bunker Hill Mining on December 11, 2025

The Silver Valley of Northern Idaho

PROCESSING CAPACITY IN THE SILVER VALLEY (TPD)		
Bunker Hill	1,800/2,500 ⁽¹⁾	BNKR:TSXV (US\$205M)
Lucky Friday	1,200	HL:NYSE (US\$12B)
Galena	1,000/600 ⁽²⁾	USAS:NYSE (US\$2.1B)
New Jersey	400	IDR:NYSE (US\$603M)

⁽¹⁾ Bunker 2.0 targets a 2,500 tpd throughput

⁽²⁾ Galena has a secondary mill currently on care and maintenance

- 100% private land, 406 patented mining claims
- Historical 50/50 silver-base metals revenue mix
- The largest land package in the Silver Valley: 2,300 hectares, underexplored, open at depth
- Portal access to wide zones of shallow mineralization in cool, solid host-rock, enabling low-cost mechanized UG mining
- 1,800 tpd Plant, \$0.06/kWh grid power and highway access to Trail Smelter; no union
- Operating Water Treatment Plant, in partnership with EPA and IDEQ, with significant excess capacity

Strategic Highlights of the Transaction

Teck Resources owns ~41% of Bunker Hill Mining and has an offtake agreement for Zn-Pb concentrate

- **Consolidated Land Position:** The acquisition unites the Ranger-Page and Bunker Hill properties into a contiguous land package, creating one of the largest and most prospective holdings by any single company in the Silver Valley.
- **Exploration Upside:** Historical drilling and production data from the Ranger-Page Project indicate high-grade silver-lead-zinc mineralization along the Page vein system, which remains open at depth and along strike.

- **Infrastructure Synergies:** The Ranger-Page existing underground workings and surface access points could provide additional flexibility for future mine planning, ventilation, and exploration access to deeper levels of the Bunker Hill system.
- **Complementary to Restart Plan:** The acquisition aligned with the commissioning of the Bunker Hill Mine, where the production of concentrate from the new Mine was announced June 29, 2026, on schedule, with the ramp-up to commercial production expected by the end of 2026.
- **Teck Resources Offtake Agreement:** Teck has acquired a ~41% equity stake in Bunker Hill and secured a life-of-mine offtake agreement for 100% of the zinc and lead concentrate to feed its [Trail Smelter](#) in southeastern British Columbia.

Why Sell Ranger-Page Project?

Bunker Hill shares are well-positioned for a re-rating to Junior Silver Producer Peers in 2026

Source: Bunker Hill Mining - production figures shown as best of 2025 guidance, pro rated H1 2025 production, and first full-year production (Bunker Hill AgEq calculations done at PFS prices (effective August 29, 2022)).

Financial Highlights of the Transaction

All-share transaction gives Silver Dollar equity exposure to a near-term producer

Silver Dollar acquired the Ranger-Page Project on August 7, 2024 (see [news release](#)) and entered into an agreement to sell the Project to [Bunker Hill Mining](#) on October 27, 2025 (see [news release](#)) in an all-stock transaction. Under the terms of the agreement, Bunker Hill acquired all of Silver Dollar's interest in the Project for total consideration of \$3,500,000, payable by the issuance of 23,333,334 Bunker Hill Common Shares at a deemed price of CAD\$0.15 per share. The transaction closed on December 11, 2025 (see [news release](#)) and the value of the Bunker Hill shares at the time of closing was approximately \$5,800,000.

“

Finalizing this transaction represents the successful execution of our strategic vision for Ranger-Page. The closing established Silver Dollar as a significant and supportive shareholder in a near-term producer, providing our investors with direct, leveraged exposure to the restart of the new Bunker Hill Mine, where the production of concentrate was announced June 29, 2026, on schedule.

We believe this transaction delivers an accelerated path to value creation for our shareholders compared to the independent development of Ranger-Page, and we look forward to the growth of Bunker Hill in the years ahead through production and exploration.”

*Greg Lytle,
President of Silver Dollar*

Nora Silver-Gold Property

Mineralization is indicative of many deposits and mines in the region

Situated ~200 km NNW of the city of Durango, within the “Silver Trend” that runs NW to SE through Durango State, Silver Dollar acquired a 100% interest in the Nora property from Canasil Resources, subject to a 2% net smelter returns royalty retained by Canasil.

- Nora is on-trend with Endeavour Silver’s [Guanaceví mine](#) and Fresnillo’s [San Julián mine](#) to the NW; and ~50 km west of Endeavour Silver’s [Pitarrilla project](#), a major discovery by Silver Dollar’s technical advisors Perry Durning and Frank (Bud) Hillemeyer.
- The geological setting is a Tertiary-aged volcanic flow-dome complex, with mineralization indicative of many deposits and mines in the region, with Au and Ag associated with galena, sulfosalt minerals, and lesser pyrite, sphalerite, and chalcopyrite.

The Candy Vein, which shows evidence of small-scale historical mining activity (upper right), is 0.5 to 2.00 metres wide and is exposed in discontinuous outcrops for over 900 metres, with the fault structure hosting the vein traced for over 3 kilometres.

Note: A qualified person of Silver Dollar has not done sufficient work to verify the historical exploration.

Nora Surface Sampling

Encouraging surface sample results up to 29.61 g/t gold, 2,215 g/t silver and 3.34% copper

As reported in a news release of [February 8, 2024](#), Silver Dollar encountered unresolved assay discrepancies while verifying the 2020 and 2021 drill results Canasil reported on the property. Consequently, a re-evaluation of all exploration targets is in progress and the latest surface sample results were reported on [April 16, 2024](#).

Silver Dollar's **initial geological mapping and sampling of priority anomalies** included collection of 89 rock chip and channel samples, along with 33 soil samples collected—41 of which targeted the primary Candy vein. Assay highlights include:

- 21 samples returned >100 g/t Ag, including 10 samples >200 g/t Ag, 4 samples >500 g/t Ag and **2 samples >1,000 g/t or (one kg/t) Ag**.
- Sample R-053 returned **29.61 g/t Au over 0.35 metres (m)**, confirming the presence of high-grade gold in the Candy vein structure.
- Samples RM-1009 and RM-1013 returned **2,215 g/t Ag over 0.8 m** and **1,212 g/t Ag over 1 m**, respectively, confirming high-grade silver in the Candy vein structure.
- Five samples exceeded **>1% Cu**, including **two samples over 3% Cu** within the Candy vein structure.
- Elevated levels of zinc (**7 samples >1% Zn**) and lead (**20 samples >1% Pb**) are also encouraging as they seem to be the best pathfinders for geochemistry.

Silver Dollar has a drill permit in place.

Sampling the main Candy Vein structure

Management & Directors

Over 100 years of collective experience in exploration, mining, and the capital markets

Gregory Lytle – President, CEO & Director

Greg has been providing strategic advice to mineral exploration companies for over 20 years. He has served as a consultant to the Company since it completed its initial public offering in May 2020 and was appointed President and CEO in March 2025. As Managing Director of Lytle & Associates, a corporate communications and advisory firm that has supported private and public enterprises for over 30 years, Greg's experience spans various industries, including technology, biotech, real estate, publishing, and mineral exploration. He has facilitated the raising of over \$100 million in funding for clients and initiated relationships with industry leaders, including American Express, GE, Intel Capital, and Morgan Stanley. Greg was also instrumental in the sale of the Valentine Lake gold project to Marathon Gold.

J.J. (Jeff) Smulders, BSc, MBA – CFO, Corporate Secretary & Director

Jeff is a seasoned financial professional with over 45 years of experience in accounting, taxation, and financial management. His career began at a prominent accounting firm, followed by a decade of leadership in financial operations at a major mining company. For the past 25 years, Jeff has operated his own financial consulting practice, providing strategic guidance and advisory services to a diverse portfolio of private and public companies. Now semi-retired, he continues to offer his deep expertise and practical insights to clients seeking trusted financial counsel.

Bruce MacLachlan – Independent Director

Bruce brings over four decades of experience in mineral exploration to the Company, with a strong track record of guiding projects from grassroots discovery to advanced-stage development. His career includes roles as Geological Technician/Prospector with Noranda, Hemlo Gold, and Battle Mountain Gold; Project Manager with CanAlaska Uranium; and Exploration Manager with Noront Resources and Rare Earth Metals. Since 2001, Bruce has served as President and CEO of Emerald Geological Services, and in August 2024, he was appointed President and COO of TSX Venture-listed Bold Ventures Inc.

Management & Directors

Over 100 years of collective experience in exploration, mining, and the capital markets

Guillermo Lozano-Chávez, MSc, MBA, PGeo – Independent Director

Guillermo is a Professional Geologist with over 40 years of experience. He previously served as Vice President of Exploration for First Majestic Silver, where he was responsible for all exploration activities in and around five operating mines. Prior to that, he was Director of Exploration for Silver Standard Resources, managing exploration projects in Mexico and overseeing operations in Peru and Argentina from 2002 through 2012. Since 1990, Guillermo has also operated his own consulting firm, working with several major and junior mining companies throughout Central and South America. Earlier in his career, he held roles with the Penoles Group as both an Exploration Geologist and Mine Manager.

Glen Wallace, MBA, CPA, CGA – Regulatory Compliance

Glen has served as Chief Financial Officer, Chief Compliance Officer and a director with several development-stage public companies since the 1990s. He is a CPA with over 30 years of experience in accounting and the management and administration of publicly listed companies and was a partner in the accounting firm of Austin Chan & Wallace for six years. He has an MBA from Laurentian University and Advanced Specialty Certificates in Forensic Accounting and Securities Fraud Analysis from BCIT. Glen brings extensive skills in regulatory compliance, finance, and administration to the Company.

Colleen-Sue Davis – Administration

Sue has extensive experience in providing corporate administrative services to public companies in Canada, including ensuring compliance with statutory and regulatory requirements and implementing decisions made by the Board of Directors. She has served as Corporate Secretary and senior officer of numerous companies, including Gold Finder Resources, since 1987.

Exploration Managers

All phases of experience from exploration and mining to stakeholder relations and administration

Dale Moore, P.Geo. - Exploration Manager & Qualified Person

Dale co-owns Tamarack Geological Services and managed exploration at Silver Dollar's Ranger-Page Project in Idaho prior to its sale to Bunker Hill Mining. He holds a BS in Geology and is a Certified Professional Geologist (CPG) through the American Institute of Professional Geologists. He is a licensed Professional Geologist in Washington, North Carolina, and Idaho, as well as a Qualified Person (QP) as defined by National Instrument 43-101. Dale's career spans exploration and production geology across Washington, Idaho, North Carolina, and Alaska. His experience includes corporate development at a tier-one mining company, which has given him a deep understanding of the profitability drivers of exploration and mining projects. He has an extensive network of industry contacts and currently reviews and advises Silver Dollar on new projects for potential acquisition.

Mark Malfair - Country Manager, Mexico

Mark is a consulting geologist managing Silver Dollar's exploration projects in Durango, Mexico. Based in Durango and bilingual in Spanish and English, Mark has over 25 years of experience in all phases of the mining industry from prospect generation and exploration to production. He has previously served as country manager in Mexico and Honduras handling all geological, administrative, legal and stakeholder relations aspects of running a company and its exploration programs. His previous roles include vice president of exploration for Chesapeake Gold Corp. (2007-2015) where he was lead member of the ground team responsible for advancing the Metates Au-Ag-Zn Project in Durango State through pre-feasibility. Metates is one of the largest, undeveloped disseminated gold and silver deposits in the world.

Technical Advisors

2010 recipients of the PDAC's Thayer Lindsley International Mineral Discoveries Award

Perry Durning, MSc.

An economic geologist who has been involved in mineral exploration for over 50 years, Perry focused much of his career on grassroots exploration in pioneering areas. He graduated with a B.Sc. in geology from San Diego State University and an M.Sc. in Economic Geology from the University of Arizona. Perry has worked extensively throughout the western United States, Mexico, and Central and South America. He worked for Amax Exploration, SAGE Associates, and Occidental Minerals before becoming exploration manager and then president of Fischer-Watt Gold Co.

Frank (Bud) Hillemeier, MSc.

An economic geologist who has been involved in mineral exploration for over 35 years, Bud has a proven record of discovery. He graduated from the University of California at Berkeley with a B.A. in Geology and from San Diego State University with an M.Sc. in Geology. Bud has conducted extensive exploration programs in the western United States, Mexico, Honduras, and Costa Rica. He has worked with an array of clients including Kennecott, Meridian Gold, BHP, Mount Isa Mines, Hecla Mining, Crown Resources, Monarch Resources, Silver SSR Mining, Canplats Resources, and The Electrum Group.

Having worked together for over a decade at Fisher-Watt Gold, Perry and Bud formed La Cuesta International, Inc. in 1993 and are recognized for their outstanding record of grassroots discoveries that collectively amount to over a billion ounces of silver and 10 million ounces of gold and include the:

- [San Sebastian Silver-Gold Project](#), owned by Hecla Mining.
- [San Agustin Gold-Silver Mine](#), being acquired by Heliostar Metals.
- [Pitarrilla Silver Project](#), owned by Endeavour Silver.
- [Camino Rojo Gold Mine](#), owned by Orla Mining
- [Cerro Los Gatos Mine](#), owned by First Majestic Silver (70%) and Dowa Metals & Mining (30%).
